

ABSTRACT

5 A soft capsule in which a shell is filled with fill
material, and the fill material is in a solid or semi-solid
form at room temperature. The soft capsule may be a chewable
capsule, and the fill material may comprise a low melting
point additive. The content of the low melting point
additive may be 10% or more with respect to the total weight
of the fill material, and may have a melting point of about
10 20 to 50°C. The low melting point additive may be selected
from the group consisting of chocolate base, lard, coconut
oil and macrogol (polyethylene glycol) as well as a
combination thereof.
